

Introduction of Unit13

The evaluation of unit13 including

- Documentation
- Feedback
- Building the website

Requirements

Designers

- The website needs at least 8 linked pages.
Requirement met by producing 8 linked pages.
- Colours theme used in the website.
Requirement met by choosing 4 colours and 2 images used for background for the website. Grey, Lightgrey, Drakgrey, Black and also images for backgrounds.
- Fonts
Requirement met by using one font for the whole website. The size of the font is changed when the text is a heading.
- Images
Requirement met by making the images in each page being the same size.

Overall requirements for designers.

The designers have met all the criteria for the website.

Maintainers

- Checking files for updates.
The maintainers have met the requirements by checking files and updating them if needed.
- Making sure if the links for assets are working or not
The maintainers have met the requirement by going through all the links in the assets file.
- Testing the website to make sure it functions well.
The maintainers have met the requirement by testing out the website whenever it gets changes and updates.
- Github repository
The maintainers have met the requirement by creating a github repository.

Overall requirements for maintainers.

The maintainers have met all the criteria for the website.

Visitors

- Accessibility
The visitors are able to access the website without a problem.

- Functional navigation
The website has a easily functional navigation in it.
- Responsive website
The website can be access and easily navigated through smaller screen devices like(Phones, tablets etc.)
- Appropriate content
The website contains only appropriate and content related to the business. (in short, it only contains pictures and videos of phones.)

Overall requirements for visitors

The team has met all the criteria for the visitors of the website.

Updates

- "Contact us" Page

Changed the layout a bit. instead of writing down the social media names and linking them to their page, used images of the social medias and putted hyperlinks to the images.

-

"On Sale" Page

Instead of only inserting pictures in we also putted a border around them to make them more appealing.

Overall updates

Updates have been disguised and approved by the team for a better styling and navigation.

Tests

Responsive

- Almost all the pages passed the test. there are slight issues with the "Contact us" page and "On Sale" page. In the "Contact us" page when run trough a phone the text gets out of the are it should be. On the "On Sale" page the picture that says Sale doesn't fit in the space required.

Navigation bar

- The navigation bar works perfectly. There are not any issues whit it, all the buttons are working perfectly.

Video

- Both of the videos on the website are working well. there is slight issue with the size but that doesn't effect the way the video is played.

Carousel

- The carousel has an issue, it doesn't work properly. The arrows are supposed to show you more content but they don't work.

Browser accessibility

- The website is able to run on different browsers. The tested browsers are Chrome and Internet Explorer. The website has no issues being runned by a different browsers, everything works perfectly.

Hyperlinks

- All the hyperlinks are working with no issue. they take you on the correct pages of the website.

Overall testing

The website passed almost all the tests it performed. There are slight issues with responsibility which needs improvement. The carousel also need to be fixed in letter release. The test have been done on all new updates for the website.

Strengths and weaknesses

Strengths

- The website is easy to navigate and use. Everything is kept simple and clear for an easy use. Simple fonts and colours that are also attractive and not too fancy.

Weaknesses

- Not that good in terms of styling and positioning. Could put more information in some pages because they look too blank. The buttons could be styled better because now they look like a simple text.

Overall Strengths and weaknesses

Simple design and easily navigational website. Could be improved in terms of positioning and information.

Feedback

Armandas

- It would nice if the carousel would work. Contact us could be taking up entire page instead of a corner.

Viktor

- it should be better if you have added a "back" button to some pages, the phone pages have to be more centered on the page

Overall feedback

The website has some bugs that need fixing and components that could be added.

Wireframes

Main

- The main

The Design was chosen because it has an easy usable navigation and the products are presented better than the alternative one. We also had a little changes while developing the website.

Alternative

- The alternative

The Design was not chosen because it was not suitable for the purpose. The preproduct is not presented as well as in the main design. The navigation bar is not visible enough so it would be harder to navigate the website.

Changes

- We changed the Phone Page a little bit. Instead of adding 2 buttons we added 1 and linked the video of the phone to the image instead of a separated button. That way we made the website more interactive.

Meeting requirements

Visitor

- Visitor requirements are met by creating an easily navigable website. For the navigation we chose to make it as simple as possible. We made a navigational bar at the top of the website with all the pages linked in it.

Designer

- The designer requirements were met by creating 2 wireframes for the website, a main one and an alternative one.

Owner

- We met owner's requirements by choosing a product for the website. We chose to sell phones because we wanted the website to sell technology.

Maintainers

- The requirements for the Maintainers were met by creating a structured folder of the whole documentation and a file of all the assets used for my website (photos, links etc. Creating a github repo with all the files sorted in it).

Overall requirements meeting

The team has met all the requirements needed for the job.
